

BERGER[®]

SOFFIT AND SIDING
ACCESSORIES

BERGER VALUE

Founded in 1874, Berger has established itself as a leading provider of high-quality roof drainage, moisture protection, snow retention, and ventilation systems for residential and commercial buildings nationwide. Our Trim Coil, Soffit, Fascia, and Accessories are designed to withstand challenging weather conditions while ensuring a tidy, durable appearance. Architects and builders trust Berger for our commitment to excellence, customization options, competitive pricing, and unmatched customer service.

BERGER TRIM COIL FEATURES & BENEFITS

- Comes in a wide selection of over 80 vibrant colors, providing you with an extensive palette to effortlessly integrate and enhance the aesthetics of your project.
- High-quality aluminum ensures durability, longevity, and resistance to rust, corrosion, and weathering.
- Lightweight nature ensures quick and effortless installation, while its malleability allows for easy customization and precise fitting around corners and edges.
- Exceptional protection for vulnerable exterior areas, shielding against moisture and debris. It effectively prevents damage such as rotting or staining to the building's fascia and trim.
- Safeguards structural integrity and reduces the need for costly repairs and maintenance.

SOFFIT AND SIDING ACCESSORIES

- Quick and hassle-free installation, saving time and effort.
- Wide range of colors and sizes available, allowing perfect matching with your fascia for cohesive and coordinated aesthetics.
- Effective prevention of moisture infiltration and maintenance for proper ventilation, ensuring a healthy and moisture-free environment.
- Protection of vulnerable areas on your building's exterior, such as eaves and gable ends, from potential damage.
- Achieve a polished and cohesive appearance for your property while ensuring reliable functionality with Berger's Soffit & Siding Accessories.

SOFFIT ADVANTAGES

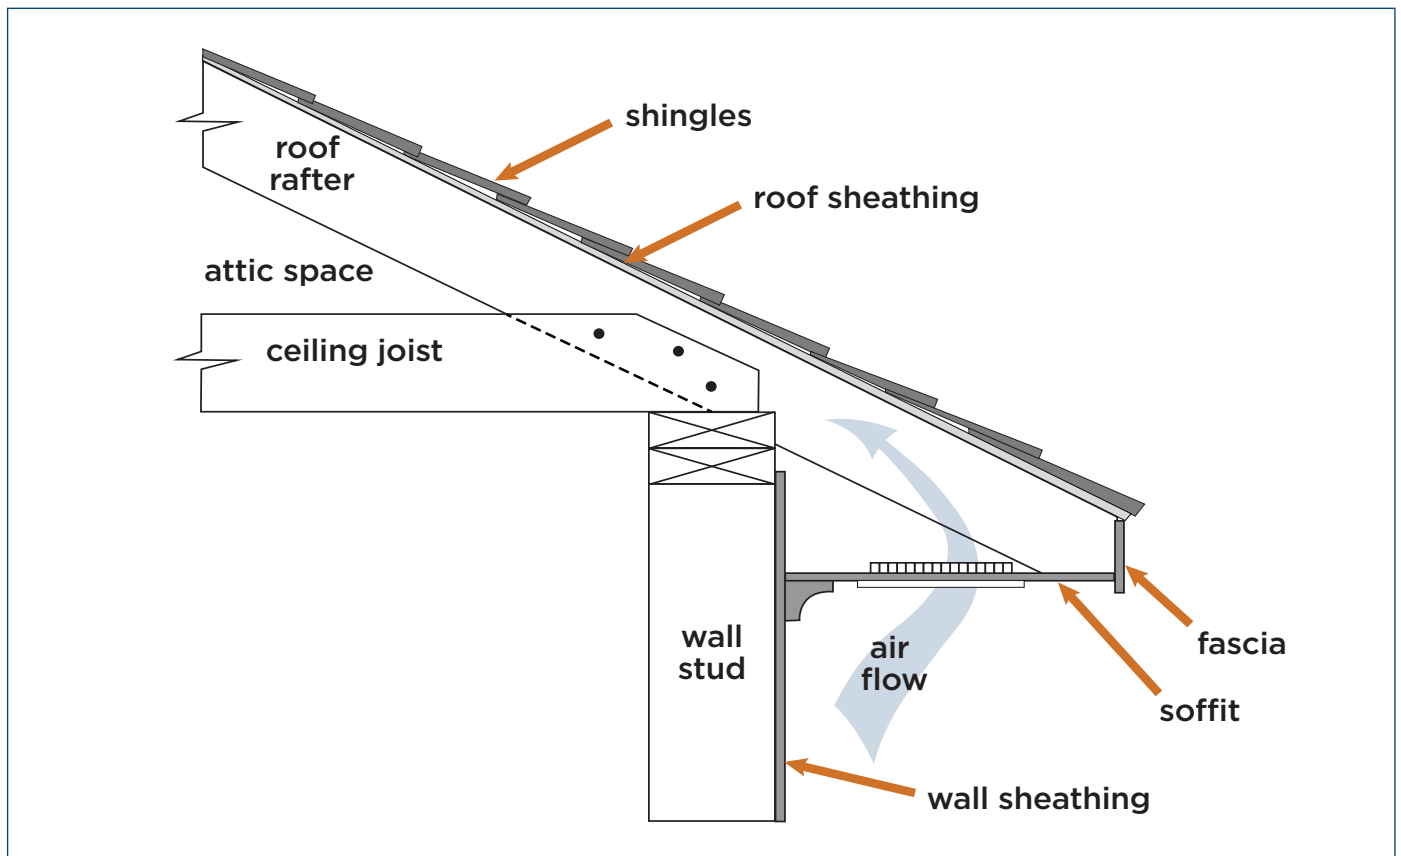

THE IMPORTANCE OF SOFFITS IN ATTIC VENTILATION AND PROTECTION

Soffits are vital components in maintaining attic ventilation and preserving the eaves, protecting them from moisture and rot. They adhere to industry guidelines such as the NFVA (Net Free Ventilation Area) and the 1:300 Rule for attic ventilation. The NFVA measures the open area in a roof vent, allowing air movement. Following NFVA guidelines, a minimum of 1 square foot of attic ventilation is recommended for every 300 square feet of attic floor space, evenly distributed between intake and exhaust. This promotes an effective airflow balance, keeping the roof dry, preventing mold formation, and safeguarding against damage and rot.

Vented soffits also contribute to a comfortable living environment by addressing the challenge of temperature extremes throughout the year. Inadequate ventilation can lead to condensation issues due to the contrasting temperatures between the roof's exterior and the heated interior. However, properly installed and vented soffits prevent dampness, ensuring a healthier and more durable roof.

Beyond their role in attic ventilation, soffits enhance the overall aesthetics of a building. With various styles and finishes available, you can select soffits that complement the siding, creating a visually appealing exterior.

By incorporating vented soffits into your siding installations, you effectively contribute to meeting the recommended NFVA and 1:300 Rule, providing optimal attic ventilation and protection against moisture-related issues. This enhances the roof's longevity, integrity, and contributes to a healthier and more comfortable living environment for homeowners.
